Title: Survey on Household Budget Practices

Survey Organization(s): Istituto per le Ricerche Statistiche e l'Analisi dell'Opinione Pubblica (Gallup) (DOXA)

Sponsor(s): None

Field Dates: January 1954

Sample: Italian families of all social classes

Sample Size: 883

Sample Notes: None

Interview method: Face-to-face interview; Paper and pencil interview (PAPI)

Weight Location: None

No. of records per respondent: 1

Usage Notes: This dataset has been converted from column binary. Do not use column locations on the questionnaire as they refer to the column binary file. Please refer to the ASCII data locations (found in the documentation PDF) instead. For multiple response items, 1=Item Chosen and 0=Not Chosen. Interview dates are approximate. Public records were not available for verification of frequencies.

Please note that data provided by the Roper Center for Public Opinion Research may not be re-disseminated without written permission. The results of any analyses conducted on the data may, however, be published with appropriate acknowledgments and source citation.

Study Notes

- For single-punch columns, string values were converted to numeric (X=11, Y=12) in order to facilitate data analysis. Note: For columns 63 through 66 (Question 11) and columns 75 through 78, "X" was recoded to "10" for clarity.
- The following questions were recoded; therefore, the codes in the dataset files do not match the codes in the codebook:
Column 11
Question 9 (columns 39 through 54)
- In Question 1, respondents were asked to indicate how many children received extra pay, but there is no column containing this information. Likewise, responses to Question 10 follow-up questions are not available.
- For Questions 3, 4, 5, and 7, there are several cases with punches that should not be there (based on the respondent's answer to a previous question).
- The first case in this dataset only has punches for columns 1 through 8 and columns 75 through 80. Additionally, the documentation states that there are 883 cases in this survey, whereas there are 884 cases in the dataset. Therefore, it appears that case 1 represents survey identification numbers rather than a respondent. Case 1 was left in the dataset, but the following changes were made:
 - a) Columns 55 through 62 (Question 10) – The responses corresponding to the dashes (-) under these columns in the codebook were originally signified by blank punches in the dataset. These blank punches were recoded for clarity for all cases except case 1, which was left as system missing.
 - b) Columns 75 through 78 – These columns originally had "X" punches for case 1, but were set to system missing in order to differentiate them from respondent answers.
- There are no published frequencies available for verification of dataset frequencies.
